

Vision Referral

Dear Parent/Guardian,

Thank you for allowing us to perform a vision screening on _____ on ____ ____. Vision screenings are good beginnings to eye care. A screening does not replace a professional examination, but can help identify those at risk for eye disorders. Eye disorders found in their early, treatable stages SAVES SIGHT.

Chart Screening - Chart screening is used for children who can identify shapes or letters on an eye chart. The purpose of the chart screening is to test the child's ability to focus on what's on the chart from 10 feet away. Children with impaired distance acuity may have difficulty seeing the board at school.

Stereopsis - is a test used to help determine if the child's eyes are working together. If a child's eyes are not working together, there is a significant risk for having amblyopic, or lazy eye. Not all children, especially very young children, will be able to complete this test as it requires them to be able to follow directions and point to specific things.

Vision Screening – Automatically screens for common vision problems, including near – and farsightedness, asymmetrical focus, and unequal power between eyes.

S is the sphere of the eye measured in diopters.

C is the cylinder, a measure of astigmatism.

D is the difference in the mean spherical power between the two eyes (displayed in child mode only).

A +9.9 or -9.9 indicates a reading outside the unit's measurement range.

RESULTS OF SCREENING

<u>Chart Screening</u>	<input type="checkbox"/> Passed	<input type="checkbox"/> Failed	<input type="checkbox"/> Could not test
<u>Stereopsis</u>	<input type="checkbox"/> Passed	<input type="checkbox"/> Failed	<input type="checkbox"/> could not test
<u>Vision Screening</u>	<input type="checkbox"/> Passed	<input type="checkbox"/> Failed	<input type="checkbox"/> could not test
<u>Difference</u>	<input type="checkbox"/> Passed	<input type="checkbox"/> Failed	<input type="checkbox"/> could not test
<u>Color Vision Tested</u>	<input type="checkbox"/> Passed	<input type="checkbox"/> Failed	<input type="checkbox"/> Could not test

What do you do next? - Now that the screenings are completed, call or visit your vision specialist immediately. On the back of this form is a list of vision specialists in the area.

Don't forget to take this form with you when you go for your appointment.
